

I Warranty

Warranty

TIGER offers long-term warranties on architectural applications of TIGER Drylac® products to its business partners in the metal coating industry. Coating companies extend these warranties to include pretreatment & processing and present the warranty as a whole to its partners.

TIGER's limited warranty is based on the degree of gloss – even reduction of gloss without adversely affecting the decorative appearance of the coated surface – over the entire warranty period.

Additionally, TIGER warrants the compliance with the voluntary specifications, performance requirements and test procedures for high performance organic coatings on aluminum extrusions and panels, as set out in AAMA 2603-13 (1 year of Florida exposure), AAMA 2604-13 (5 years of Florida exposure) and AAMA 2605-13 (10 years of Florida exposure). Certain restrictions apply.

To make TIGER limited warranties effective, the coating company must observe all the requirements specified by TIGER, e.g. complete documentation of the processing conditions.

Additional information about the scope of TIGER warranties can be found in the respective sample warranty, which TIGER will provide upon request.
