To whom it may concern:

Drylac® Coating Powders

With regards to VOC emissions of powder coatings: Powder coatings have many performance benefits. It should not be overlooked that it is also a very environmentally friendly technology which does not release volatile organic compounds during the cure of most powder coatings.

Drylac powder coatings do not contain volatile organic compounds („VOC“) according to the definitions of:

- Directive 2004/42/CE of the European Parliament and of the Council of 21 April 2004 on the limitation of emissions of volatile organic compounds due to the use of organic solvents in certain paints and varnishes and vehicle refinishing products and amending Directive 1999/13/EC.
- Directive 2010/75/EU of the European Parliament and of the Council of 24 November 2010 on industrial emissions (integrated pollution prevention and control)
